

SELLERS AS CREATORS

Category	Question	Response
CAITS	Is there an existing dashboard/report that shows seller performance day to day / overall?	We have engagement data across posts. US: Performance by seller will be shared via manual table by Orca EOW (will update once ready). Otherwise, seller reporting has been piecemeal in adhoc decks (example)
CAITS	What existing analytics are available to track inbound source of Live viewers? Relative quality of sources of inbound?	
CAITS	Who manages the "Explore" tab and how does the process of prioritizing certain sellers or categories work?	The product team owns this tab. There is different logic on what is surfaced here whether you are new to live (and have no signals) or if you are not new, but not habitual, or if you are a habitual user. The more signals we have, the more personalized the experience. Will need to follow up with "new to live" experience.
CAITS	Can we get the current state of the onboarding toolkit/FAQ they mentioned?	- Link to resource center - Link to playbook
CAITS	Is there a list of the current invite-only exclusive live sellers before the platform opened up?	Are you asking for all the sellers we have on the platform before opening up? Not exclusive sellers?
CAITS	Are there any live seller shows that are top performers to date?	KG to ask Chelsea/Aya
CAITS	Are there any live sellers who have been great content creators?	Vookum Tanner & Co BlackGold Sports Cards Linda's Stuff
CAITS	Is there any category that has the above benchmark existing audience attention?	KG to ask Chelsea/Aya
CAITS	Can we get a breakdown of the teams that currently exist around recruiting and supporting sellers?	GSD- Global Seller Development Seller Enablement Business Development [what they do]
CAITS	Do we have access globally to spaces where we can set up potential sellers to film? Is there interest in exploring the creation of space in the US / Europe at VM locations to help set prospective sellers up?	We have a studio in our office in Berlin (DRL). In London, we have a studio space being built out in Richmond. We also have our fashion archive which is a good place for styling/fashion lives. But opportunity to build out studios outside of our office locations.

CAITS	Can we get a full breakdown of how the compensation model works for sellers and where its the same/differs across different countries?	[rate card]
-------	--	-------------

GLOBAL PLATFORM & HANDLE

Platform + Handle	How is customer service currently managed and what does the team size look like (both overall and across countries/languages)?	Customer Services (GCX) is managed by teams in the regions. GCX - Angela Owen Leads globally. Sinead Duffy has EU (UK+ DE) and FRITES Socials and Communities and Blaise Rwiririza has NA Social and Community. • EU GCX - 7 team members handling all volume • NA GCX - 10 team members handling all volume In the EU Social teams respond to customer engagement and GCX respond to queries/complaints. Channel servicing: • DMs are serviced on Instagram only but not on Facebook, TikTok, Pinterest and X • Inboxes that are not serviced have an automated message direct queries to https://www.ebay.co.uk/help GCX uses an internal tool, ICX, to reply to Instagram DMs and comments on social media. Not done natively.
Platform + Handle	Outside of the US, Germany, UK, France, and Italy, are there any other countries who have dedicated or regional specific teams and if so, what are they and how are they managed?	Australia is the other team with a marketing function, they will have their own social agency and handles. We can track down more details on their approach if helpful?
Platform + Handle	What are the existing social or social-tangential channels that exist across all eBay markets and workstreams. For example of "social-tangential", are there any Discord channels that are maintained for seller relationships?	The seller engagement teams in UK, US and DE manage some eBay for Business/Seller social channels, community boards etc. DE seller engagement team have Discord channel set up. Details here.
Platform + Handle	Outside of the workstreams we've discussed, are there any other relevant content creation workstreams we should be aware of globally? E.g. content partnerships, executive communications, etc?	There is an exec content studio producing communications for Jamie, this is owned by the comms team. The consumer comms team also produces content and engages in partnerships. The Live BU also does this, but hoping this can all consolidate. US Seller team is also under contract with DEPT for social content. They use internal GCC team for some asset production (Ex. seller spotlights, eBay Open) as well. Seller regularly posts to Core Facebook via DEPT workstream. They post and simulcast seller webinars onto Core YouTube.

		Occasional collab posts with @ebay Instagram. Global Content Partnerships: Condé Nast EU Content Partnerships: LadBible, TikTok CLP, Blue Fish AI, Love Island, Bares fur Rares? Mein Lieblingsstück
Platform + Handle	We're aware of the teams who'd be the primary partners/stakeholders in the US, UK, Germany, and are learning about FR/IT. Are there any other local/regional stakeholders we should be aware of outside of those countries?	We will continue to be your primary conduits.
Platform + Handle	From a business perspective, outside of US/UK/Germany/France/Italy, are there any other areas of priority or any relevant points of business context that would either prioritise or deprioritise the stand-up or maintenance of organic social handles?	As we think about One EU market (27 markets) we will need to build an adaptable model that allows us to test into these new markets without a lot of overheads.
Platform + Handle (new)	Business priorities: Which categories/communities matter most to the business today, and where are you looking for growth?	From an eBay Live perspective, our core right to win categories are CCG/STC, Enthusiast toys, Sneakers, Luxury fashion/accessories. Beyond these high priority categories we are focused on maintaining low ASP fashion, CCG singles, coins, and electronics. On Core, P&A is our biggest category, though we have yet to extend successfully into Live. Electronics and fashion are also important categories. These will all be defined in 2027 planning
Platform + Handle (new)	Category performance: What can you share on GMV, growth, buyers and sellers by category and market?	We will share a download on this in EU on Thursday and share the deck around. We can then see if you need any more detail.
Platform + Handle (new)	Live performance: What categories/communities are showing the strongest traction on eBay Live today?	Shared in UK/DE deepdive here .
Platform + Handle (new)	Audience priorities: Are there specific buyers or audiences you're particularly focused on acquiring or growing?	See focus customer introduction here for details on our highest value customers and characteristics of our prospecting focus customers.

Platform + Handle (new)	Seller priorities: Where are you most focused on recruiting sellers, and who are the priority sellers/creators you're targeting?	
Platform + Handle (new)	Market differences: What do we already know about meaningful differences across the US, UK and Germany?	Some of this is in our pack
Platform + Handle (new)	Existing intelligence: What audience, category or community research/data already exists that we should build from?	

MEDIA & ANALYTICS

Category	Question	Response
Organization Understanding	Please provide an overview of the different media/paid/measurement teams by listing names, titles, and R&Rs for Vayner. Please also identify who the main daily POC's will be.	
Organic Reporting	We know we will leverage Sprinklr for data enablement and discussing dashboard approaches. We will also need native platform access for all live platforms, so we can QA and allow for non-API metrics/dimension breakouts. Are there any other tools or dashboards outside of Sprinklr used for organic reporting? Who is the audience/stakeholders for each organic dashboard?	US: We use an internal dashboard on Tableau for link tracking data. Only accessible via eBay equipment and YubiKey. Mica Hoffman is the main stakeholder. EU: We have weekly Live flash reporting, Monthly Business Reviews (MBRs) and Quarterly Business Reviews (QBRs) delivered as part of our work with DEPT. All channels are routed through Sprinklr, we have a range of dashboards. Any link tracking tacking is on a case by case basis. To access Sprinklr you will require an eBay email. Is Sprinklr Vayner's primary platform of choice?
Organic Reporting	We know Organic social reporting is managed via DEPT using Weekly Flash Reports, Monthly MBRs, and Quarterly QBRs. Is this the cadence/structure of the reporting you would like to maintain? What is the format of each report? Who is the audience/stakeholders for each report?	Yes. EU: Weekly format- is in an Excel sheet to get hands on performance data on the promotion of eBay Live. Then bespoke reports are created as required. MBRs and QBRs are structured in deck format. Will share examples here. US - report examples here: - Weekly eBay Live flash reports delivered via email

		and metrics tracked via Gsheet - Weekly Core Flash report delivered via PDF in email - MBRs - QBRs - Bespoke reports as required
Amplification Decisioning	How do you currently decide what to amplify from organic to paid from a quantifiable standpoint? Is there an operational flow? • PRIME Amplification: Amplifies content that builds emotional connection and brand love, optimizing for broad reach, frequency, and audience penetration. • PROVE Amplification: Amplifies action-oriented content (e.g., specific RTBs or product features), optimizing for traffic and high-intent user conversion.	EU - Organic social boosting. In the UK, most content is boosted after a 48hr organic proofing window (min 24hr). The content is optimised toward the key goal based on Prime Prove. Depending on relevance, flighting - content is upweighted if it performs particularly well i.e. low CPEs, CPMs. In DE content is boosted within 24hrs of posting (so is not purely organic) • Prime: Reach/awareness, Engagement (VVs or post engagement), Community interaction on TT • Prove: Engagement (VVs), Traffic, Brand Consideration US: Boosting content selection has been based on cultural relevance and business priority, not necessarily organic performance. Planned organic content that aligns with strategic priorities is identified for inclusion in paid campaigns.
Media Measurement	PRIME Goals: Measured by Top-of-Mind Awareness Lift and Consideration Lift via Social Platform Brand Lift Studies (BLS) and IPSOS Cross-Media Studies. In-platform secondary metrics: Reach, Impressions, Ad Recall, VTR, and CTR. PROVE Goals: Measured by Live Viewers (LV) and Quality Live Viewers (QLV). Tracked internally via the eBay Live Dashboard and externally via CAPI/Pixel/MMP integrations. For general buyer/seller campaigns: Engaged Visits (Buyer) and Net Organic Ranked Listings / NORL (Seller). What tools/partners do you use for site & app analytics? How often do you get results? What can we have access to?	
Media Measurement	Can you provide any details per platform / measurement system on lookback windows, offline conversion feeds enabled, postbacks from MMPs, etc.? What are the specific sources of truth for each metric? Can you provide a glossary with definitions and names of each event for all platforms?	BL (+1 AB): <u>Partner Integrations:</u> - Meta: product feed; signal via CAPI and pixel (Main events: Page view, Product View, Purchase, NORL, soon eBay Live metrics). Passbacks via AppsFlyer in place. - Snap & Pinterest: similar to Meta with some gaps - Not full product feed. No C2C and Live data sharing. Passbacks via AppsFlyer in the works.

		- Reddit: basic product and signal integration (for lower funnel purchase optimised campaigns only) - TikTok: Feed shared for some categories. No signal integrations in place. <u>Metrics source of truth:</u> - Brand metrics: different and varying levels of input: - Brand health tracker: overall Brand awareness, Consideration and Live awareness. Does not give campaign/channel/partner breakdowns. - Partner level BLS: gives campaign specific lifts by partner. - Mid funnel metrics (C2C NORLs, Live Views and QLV): internal eBay Dashboards with their own attribution logics (most are 1-day last click) <u>Definitions:</u> - eBay metrics definitions: - (C2C) NORL: New or Reactivated Lister (last 12 months) - (Live) Live View - LV: is one instance of a user joining a Live event. If the same user joins the same event multiple times, each join counts as a separate Live View. Note: this includes Signed in and Non-signed in users. - (Live) Quality Live View - QLV: A quality view is a live view that lasts more than 60 seconds or involves engagement actions such as liking, commenting, saving the seller, or browsing. Note: Only signed-in users are tracked here, so this is likely to be much lower than LV, which includes all users. - Paid Social platform definitions we use:  Social Platform Metrics
Holistic Measurement	What are the brand's short/long term quantifiable goals? (ie: increase awareness to 5% YoY, or volume of streams) & what system/tools/partners are used to measure each of them? Are goals set to be attributable to media at x% of total, or are they holistic?	Toby
Holistic Measurement	Do you have a learning agenda for 2026/2027? How does organic currently fit into this learning agenda?	
Holistic Measurement	Do you leverage a holistic brand tracker? What are core questions? How often do you get results?	We have an IPSOS monthly brand and campaign tracking that runs across buyers, sellers and live shoppers. We get results monthly. Results here. Sample report is here: Latest US Buyer q'nnaire. HERE. Latest US C2C Seller q'nnaire. HERE

Holistic Measurement	What partner do you use for MMM? How often do you get results? Is this for eBay as a whole or anything specific to Live? Is organic included in the model today?	We use our internal analytics team to run our MMMs across the Big3 markets. In the UK & DE we also utilise Analyx (but plan to sunset this relationship after the final 2025 results). Currently the MMM doesn't track Live as we haven't had sufficient spend for multiple quarters yet - the aim is to have this in place by the end of the year. It is set up to cover eBay holistically, whilst also pulling out performance against key initiatives (C2C) and categories (Fashion, P&A) We have had some challenges with data collection due to taxonomy, which has now been addressed - we should start to receive updated MMMs quarterly, 4-6weeks after the quarter ends. Organic is not currently included in the internal model, but I (Toby) am working with Analytics to change the model to be impression based - which will pick up organic.
Holistic Measurement	Platform Incrementality: Platform-native Brand Lift Studies with control/holdout groups run regularly (e.g., TikTok CLP and Meta BLSs) to verify statistically significant lift in Ad Recall, Unaided Brand Awareness, and Favorability. Please share any meaningful results, specifically around creative and audience testing. Can you share how Geo-matched market tests (MMTs) are being leveraged via iProspect and share any historical results? Are these used to calibrate an MMM if applicable?	BL (+1 AB): <u>BLS learnings</u>: Creator/Influencer content helps drive Intent vs Brand assets which are better at driving Recall and Awareness. In some instances, we've observed the same behaviour when running ads from Influencer handles (Partnership ads) vs eBay Handle, but not across the board. No major BLS tests learnings around audiences. <u>Geo-tests</u>: we have not run geo-tests on Social platforms to date, we've done user-level. Exploring an eBay Live one ATM. <u>MMM calibration</u>: Yes, when available, incrementality tests (conversion lift studies) are used to calibrate MMMs. Brand lift studies are not yet an input since we do not have an MMM Brand model.
Measurement	What is the time to convert to sign up for an account with eBay?	
Measurement	What percentage of sellers do liveshopping shows today? What's the avg. amount weekly? What percentage of buyers participate in live shopping?	
Measurement	What have been your leading indicators of conversion? (ie: on site action)	
KEY	✓ = answered ✗ = still missing  = new question added	 answered their question back !! important info to account for in current process
Media ✓	Are there any IAT meetings that VaynerMedia should be aware of? Any meetings specific to media that VaynerMedia should be a part of?	Jennifer Porile Zoe Carson Michael Schuetz do you have any market level regular IAT meetings that would be appropriate for them to join? Global:

		- No planned global IAT meetings, potential to be added once 2027 planning started. DE: - Agency attendees: - When: UK: Since the agency changes and budget cuts, these haven't happened, but we can take this as an action to get regular sessions back in. US: We do not have an active IAT cadence. As key workstreams are identified, we can work to stand up a series as needed with proper attendees. - Agency attendees: N/A - When: N/A
Media 	How many ad accounts do you have in each social platform for eBay vs eBay Live and across each market for all paid media? How many of them will VaynerMedia be allowed "Partner level, Analyst access"?	Blanca Led Trias Anna Barrett can you add for markets please BL: Access to all Brand & Media accounts (from where we Brand&Media runs U/MF activity, including Orca). We have between 2-3 per Social partner and market (Strategic=U/MF Paid activity, Boosting=Organic boosting, Orca). For smaller markets and DV360 it's generally 1 per market.
Media 	Does ad account access include visibility to the YouTube paid media and social partnerships executions run by iProspect, as well as the Orca paid media workstreams)? If not, are you able to provide performance data of all assets running and receive any end of campaign wrap reports with any BLS results?	Blanca Led Trias Anna Barrett can you add for markets please BL: We'll be able to give you access to DV360 (YT activity) and Socials (owned by eBay, incl. Orca activity which runs out of eBay's BM with dedicated accounts). Compiling a list of Ad accounts.
Media   	What is the process and timeline for granting VaynerMedia Business Manager "Partner level, Analyst" access" to all active native ad accounts (Meta, TikTok, Reddit, Pinterest, Snapchat YouTube), pixel/CAPI management, product feeds, social pages, and all analytics platforms across each market?	Blanca Led Trias Anna Barrett can you add for markets please, for timeline just base on number of days/weeks required rather than a specific date BL: Social Account access: activation should be straightforward, within 1 week upon having your Partner ID details and having aligned on which accounts to grant you access to. Analytics platforms: an ebay e-mail/account is required. It can take 1-2 weeks to go through request and approval process. Could you provide clarity around the need to have access to pixel/CAPI management, product feeds?
Overall Branding  	What is the eBay Live awareness within eBay consumers, and outside of existing eBay consumers?	Awareness total market (August figures): - US 37% [57% P12M eBay buyers, 19% P12M non-buyers] - UK 46%[55% P12M eBay buyers, 29% P12M non-buyers] - DE 38% [47% P12M eBay buyers, 27% P12M non-buyers]

Media ✕	What is the total eBay (eBay core and eBay Live combined) media annual investment by market, by media channel, any by each social platform?	Spend total market (note this is forever changing so have used best estimate, and the mix has changed with us supporting horizontal, P&A, Fashion, C2C and Live to just Live for Q4) UK: TV: \$7m OOH: \$2.8m Display: \$9m (includes demand gen) Cinema: \$200k OLV (VOD, CTV etc): \$14m Radio: \$1m Partnerships (Conde, Lad, Love Island etc): \$13m ePN: Search: Social: \$17.4m, broken down by • Meta: ~7.5m • TikTok ~5m • Pinterest ~1.5m (1.9m 2026) • Reddit ~\$1.4m • Snapchat ~2m @toby to add
Media ✕	What is your total, all-in, eBayLive-only media annual investment by market, by media channel, and by each social platform for eBay Live?	As of Q4, we are only supporting Live with media investment, so you can use the above as a guide (although budgets are lower) @toby to add
Media ✓	How much media annually does Orca run in paid social and what is their channel/platform budget split? Is Orca's budget considered separate (and/or incremental) from the total annual eBay Live budget or is it accounted for in the total annual eBay Live budget?	@zoe @jenny can you add in US: Orca budget is not considered incremental from total eBay Live budget - it is carved out from mid-funnel Social budgets. The budget covers seller fees & ad spend, which is across Meta + TikTok. • Q1: \$290K total • Q2: \$500K total • Q3: \$532K total (\$148,500 fees, \$383,500 media) • Q4 (planned): \$600K (exact breakdown tbc) UK: Orca boosting budget is \$100k per quarter, it is accounted for in our Live budgets (70k Meta, 30k TikTok)
Media ✓🔄	How much media annually does iProspect run with social partnerships and what is their channel/platform budget split? Is iProspect's budget for social partnerships considered separate (and/or incremental) from the total annual eBay Live budget or is it accounted for in the total annual eBay Live budget?	<i>In the main, iPro don't manage any dedicated social spend, it is all in house</i> The only exceptions are: - Potential social support activating social elements of partnerships (ie LadBible, Conde Nast). - Social boosting in DE is currently managed by iPro, but we are transitioning the work to in house teams.

Media ✕	What is the current planning/replanning of media budget allocations cadence and needs (e.g., quarterly, biannually, etc.)? Can you outline the current media planning process, any approval steps, and any notes on what currently works or doesn't?	Toby to add
Media ✓ !!	For media budget optimizations, what is the current threshold allowed without requiring approval? What is the process and workflows to move budget based on media performance optimizations (e.g., budgets are fully fluid, budget shifts under 10% can be moved between objectives only, budget shifts under 10% can be moved between campaigns only, budget shifts under 10% can be moved between paid social platforms, all budget shifts require brand approval, etc.)?	<i>Currently all budget shifts require approval from eBay, but if low level (under 100k) it can be signed off by media planning lead in market.</i>
Media ✕	What is the business challenge to be solved with media and what are you trying to get out of media holistically? If multiple goals, what is the priority and rank for each goal.	Toby
Media ✓ !!	For the "Prime" objective, what will be determined as the ultimate measure of success (or failure)? Media in-flight metrics, 1P Brand Lift Study (BLS) results, or Ipsos xMedia Studies?	Toby JP: Ultimate measure is the Ipsos campaign tracker. Partner BLS & in-flight metrics used directionally as direct/granular media learnings are not an output of the campaign tracker.
Media ✓ !!	For the "Prime" objective, how are you optimizing in-flight and what is the process? Is it based on efficient CPM, VTR, VCR, or CTR? If multiple metrics, what is the order of priority and rank?	@blanca @anna can you add for social specifically AB/BL: Since Prime KPI is brand lift, we make decisions based on BLS readouts/datacuts, mostly quarter by quarter, sometimes on a more frequent basis depending on the BLS approach by campaign. In-flight optimizations are otherwise less frequent - we report out on CPM, VTR, and CTR for creative reporting but do not over-optimize to not disrupt BLS learnings.
Media ✓ !!	For the "Prove" objective, what will be determined as the ultimate measure of success (or failure)? Media in-flight metrics or eBay's internal data sources/dashboards?	Toby BL (+1 AB): eBay's internal reported metrics (ie. LV, QLV, NORL).
Media ✓ !!	For the "Prove" objective, do you drive traffic to the app or the site, or both? Is there a total goal and/or a goal of viewers per environment (app vs. site)?	@blanca @anna can you add for social specifically BL/AB: Both. Users are deeplinked into the in-app Live experience if they have the app. If they don't, they fallback into the mWeb experience. In Q4 we plan to introduce app install objectives. Currently there are no differentiated goals by environment, but the app is the primary driver of QLVs and we plan to shift more investment to drive in-app traffic. Ideally we will have a deferred deeplink setup that redirects users to the desired in-stream experience post-app install, but this is currently only available on Meta Android due to data sharing restrictions per

		legal.
Media  	For the “Prove” objective” how are you optimizing in-flight and what is the process? Is it based on efficient CPC, CPLPV, or Live View off-social platform eBay metrics for viewership volume and/or quality live views?	@blanca @anna can you add for social specifically BL/AB: For Social, Prove optimization decision-making is based on the internal eBay KPI (i.e. CPQLV), regardless of platform signal optimization event. In-platform optimization is currently based on clicks, as Live viewership signals are not yet passed back to the platforms. However, test & learn roadmap and campaign/partner mix optimization decisions are based on eBay Live outcomes (primarily CpLV and CpQLV from internal reporting) to optimize toward both viewership volume and quality.
Media 	Overall, is being cost-efficient more important than an efficient “cost per action”? Is a “CPM” that is high/low a deal breaker for any of the two objectives?	@blanca @anna can you add for social specifically BL (+1 AB): For Social, CPM is an important efficiency indicator, but not the primary measure of success. Very high CPMs can make it harder to deliver efficiently against either Prime or Prove, but are not necessarily a deal breaker. Some premium placements carry higher CPMs but have proven effective at driving quality traffic and competitive CpLV. Ultimately, we assess efficiency against the objective and downstream outcome, rather than CPM in isolation.
Media 	Are there specific Reach & Frequency media goals expected across objectives? Or is it only measured in the “Prime” objective? If so, what are those goals? Is reach planned and measured across social platforms or unique to each platform? Is reach measured on a weekly basis or a specific time period (e.g., end of campaign, end of quarter/month, etc.)? Is frequency planned across social platforms or unique to each platform? Is frequency measured on a weekly basis or a specific time period (e.g., end of campaign, end of quarter/month, etc.)?	@blanca @anna can you add for social specifically BL (+1 AB): R&F is more relevant for the Prime objective. There are no specific goals but we plan to hit, by platform, 40-60% of the target audience during the campaign flight, at an avg. 2x weekly frequency if budget allows. This is planned unique to each platform.
Media 	How is IPSOS xMedia study measuring the “Prime” objectives?	The number tracked on scorecards is the Ipsos Campaign Tracker. This is not directly tied to media activity (ie no control/exposed methodology) but is meant to capture impact of activity in market.
Media 	Does IPSOS xMedia study not measure the “Prove” objectives?	Ipsos is not used as an input for Prove - the prove KPIs (QLV, CPQLV, etc.) are pulled from internal eBay data published via the dashboards.
Media 	Does the 1P BLS measure the “Prove” objectives as well? Are these only measured in the nested 1P BLS vs. 1P campaign-specific BLS?	@blanca @anna can you add for social specifically BL (+1 AB): We’ve started to include BLS for Prove too, those are at campaign-level. Joint with nested studies where possible. If nested isn’t possible, we’ll run them separately (Prime / Prove).

Media 	How is eBay Live determining "Awareness" and "Consideration" for the "Prime" objective?	Overall this is measured by the brand tracker, but we also review BLSs that are set up to assess too. Given the newness of eBay Live (& Live shopping in general), driving Awareness & nurturing that into Consideration are key jobs to be done to feed the funnel & bring new audiences to eBay Live.
Media  	How is eBay's internal data sources and dashboards determining and measuring "Live Viewers" and "Quality Live Viewers" for the "Prove" objective?	@blanca @anna can you add for social specifically BL: - <i>Live View - LV: is one instance of a user joining a Live event. If the same user joins the same event multiple times, each join counts as a separate Live View. Note: first click, in session. This includes Signed in and Non-signed in users.</i> - <i>Quality Live View - QLV: A quality view is a live view that lasts more than 60 seconds or involves engagement actions such as liking, commenting, saving the seller, or browsing. Note: first click, in session. Only signed-in users are tracked here, so this is likely to be much lower than LV, which includes all users.</i> - <i>Viewer count (vs Views) is just the unique count (vs total).</i>
Media  	What is the lookback window for livestream viewership for paid social to take credit for the traffic (e.g., last click)? What attribution does paid social receive for livestream traffic, livestream quality viewership, livestream purchases, etc.?	@blanca @anna can you add for social specifically (BL) See definitions above: first click, in session.
Media  	What will be determined as the ultimate measure of success (or failure) of any campaign, regardless of what the media objective is? (e.g., X amount of impressions, X amount of overall sales from livestreams, X amount of overall total views/quality views, X amount of new sellers/buyers, etc.)	In the short-term, we are developing a measurement framework designed to set benchmarks against L1 and L2 goals - success would be surpassing benchmarks & QoQ improvements. Long-term we will need to demonstrate an improved contribution to key metrics from organic and paid social via MMM studies.
Media 	Are there any benchmarks for the year and/or for each campaign that we need to consider (e.g., 1M live views as the baseline coming from paid social)?	<i>This is set on a campaign by campaign basis, based on budget & tactics</i>
Media 	Are the primary and secondary KPIs across "Prime" and "Prove" measured and determined the same regardless of social platform?	Blanca Led Trias Anna Barrett can you add for social specifically (BL) Generally yes. Partner mix is optimized based on efficiency against the same KPIs, with some flexibility to accept higher costs where there is a strategic rationale, such as testing or audience diversification.
Media 	How do your media KPIs correlate with business objectives?	Toby

Media ✓	Is there a reason 1P LaL is not used in “Prime” objective campaigns?	Blanca Led Trias Anna Barrett can you add for social specifically (BL) 1P LaLs are not used in Prime because broad category targeting delivers greater scale, stronger brand lift, and better media efficiency, while Prime engagement can then inform more targeted audiences for Prove. We target broad layering on category interests.
Media ✓ !!	What is your 1P data composed of outside of site/app engagement and media retargeting? Are you using CRM data or signups? If so, what are those CRM lists composed of and what else is available?	Blanca Led Trias Anna Barrett can you add for social specifically (BL) Audiences in scope to be ready in Q4: 1. Users who have bought an item in eBay Live over the last 12 months, split by category, 2. Users who have watched a video stream for longer than 1 minute or has done an action (liking, commenting, saving the seller & BBOWAC) in the last 12 months, but haven't bought an eBay Live item yet, split by category. 3. Users who have visited one of the eBay Live pages in the last 12 months, but haven't bought an eBay Live item yet, split by category. 4. Fashion & Collectibles audiences split by App / No App.
Media ✓ !!	Are there any exclusion lists we should be aware of that need to be applied in media? CRM, 1P, and/or retargeting?	Blanca Led Trias Anna Barrett can you add for social specifically (BL/AB) Currently we do not apply any exclusions in Live campaigns as we have been goaled against getting views/QLV in, not only those from New users/New to Live. In Q4 with the evolved Audience strategy around app-first, we will start excluding existing app users. Additional exclusions might be put in place if the Goal evolves to “New to eBay Live”.
Media ✗	What are the audience personas/cohorts identified and/or prioritized for the native targeting that is used and leveraged across “Prime” and “Prove”?	Blanca Led Trias Anna Barrett can you add for social specifically (BL) We don't use specific personas today on Paid Social (UK/DE). We target broad, layering on interest targeting. Outside of social UK: Our Prime activity is broad but audience is ‘Live Potentials’ - 18-44s with a propensity to use online marketplaces, digitally engaged & open to new shopping experience (17m) Prove we use a lot of different targeting, category specific overlaid with the likes of 1PD, retargeting, and introducing more signals. We are working with iProspect to leverage their audience solution CCS to get Live specific questions to then push back into paid, which should give us more richness in targeting, including across social. DE: Prime: Targets a broad adult audience (ages 18–54, all

		genders) with no income or marital status constraints to maximize scale while keeping messaging relevant. Prove: Uses category-specific targeting. Collectibles focuses on gaming, fandom, entertainment, and tech using 1P eBay Collectibles segments. Fashion targets style-conscious shoppers and beauty/lifestyle audiences via tailored eBay Fashion segments. Combining affinity, 1P eBay, and custom intent signals lets us capture high-intent users effectively.
Media 	How do current paid media campaigns account for overlap in targeting between "Prime" and "Prove," specifically for the native interests/behaviors/keywords/communities?	Blanca Led Trias Anna Barrett can you add for social specifically (BL) We use different assets, so optimisation and targeting between prime and prove will naturally reach different groups. However, we don't control for this specifically and overlap may exist. This is not necessarily a bad thing, especially with Live where you need frequency and repetition to land the message and drive the action to watch.
Media  	What part does paid social play in the broader execution/strategy of eBay Live? How is it different from all other media in-market and from organic social?	Zoe Carson Michael Schuetz Blanca Led Trias any builds on the below? Paid Social is paramount in our Paid Live strategy given its audience & content fit. Live audiences are highly active on social platforms, making Paid Social a natural environment to reach them with content that feels native and relevant. On some social platforms (ie, TT, Twitch), audiences are already accustomed to engaging with/shopping through live content, making social particularly well suited to driving discovery and participation in eBay Live. Lastly, it's a great fit for competitor audiences conquering. Paid social plays many roles. - Within our Prime activity, it allows us to reach consumers at scale whilst also having the secondary KPI of traffic driving. We've seen great success with high impact formats in doing both jobs of generating awareness at scale but also driving viewership - In our prove activity, it is used as a core view driver + supporting our programming. It is our most efficient view & QLV driver in the UK, we utilise both hi-fi and lo-fi content, influencer and even seller recruitment via lead gen forms In the US, it is also the most efficient view & QLV driver in Prove [excl performance marketing channels]. On Meta in particular, there are ad products (Live Ads, Live Feed Ads) that enable amplification of active Live programming to engage audiences with the format & bring them in-stream.
Media 	What other media is typically live during an eBay Live campaign that VaynerMedia won't oversee (e.g., TV, OTT, Radio, Print, OLV, DOOH/OOH, CTV, Search, Programmatic, Experiential, PR, etc.)	Priority Channels: Social, programmatic, search, affiliates Secondary (budget permitting): TV, VoD, Audio, OOH, Partnerships

Media ☒	Are eBay Live campaigns primarily national or are there any campaigns that prioritizes geo-specific markets?	Predominantly national
Media ☒	How are you thinking about flighting media and phasing investment within paid social over the course of a year? (e.g., heavy-ups, key dates, promotions, priority tentpole moments, seasonal focus, etc.)?	Always on, with heavy ups around key retail moments (e.g. cyber 5) and key events (e.g. comicon)
Media ☒	Is there specific media or investment to stay within either each quarter/month/week? (e.g., investment cannot be moved quarter over quarter, specific weekly media and/or impression goals, etc.)	We will set quarterly budgets, which can't move over quarters (there are some exceptions). Movements across weeks and months in a quarter are fine
Media ☒	Are all media channels live at the same time? (e.g., paid social is live the entirety of the year and other media is live in specific pulses)?	Yes, digital tends to be always on with peaks of other channels
Media ☒	Is paid social activated in an always-on approach or is it campaign-specific, or both?	both
Media ☒	Will the creative for this campaign be fully organically validated first, before rotating into media campaigns? Or will there be expectation to support direct-to-paid creative?	Ambition is for almost all to be organically validated first, but they may be some exceptions to weave into the plan
Media ☒	Will the creative that will be utilized for eBay Live be fully developed by our creative team and/or our CAITS program? Or, is there an expectation to also support other creative from another creative team and/or influencer and affiliates (i.e., Orca)?	As above. Potential to integrate partner produced content or internal brand produced content in addition. There are a number of different places we can get content from: - Meta affiliate program - Platform partner programs - Long term talent deals (i.e. Gronk) - Influencer work (Vayner) - Seller content (vayner to replace orca) - Creator work (Vayner) - if we need to close the gap with anything internally with our team, that is also a source of content Ideal would be to map all this in our content strategy conversation
Media ☒	Could the media team request custom social creatives (e.g., Pin extensions, Canvas, Snapchat AR lenses, Reddit Takeover Banners, etc.) from the creative team or should they request the social platforms to create for us? If so, what are the steps the media team needs to be aware of in order to request custom social-specific assets?	Toby, Kate, Alex Currently in EU, we use Dept or other agencies to create these. As we stop working with these agencies, it would be good to discuss what skills Vayner has to produce these creatives for us. It may be that our internal creative team can create some of these - in which case it will need to be requested via the brand manager, but it would be good to understand Vayner capabilities here too.

Media 	Have you leveraged and/or considered any dynamic creative optimization (DCO) tools and partners? If so, which ones? Would you only consider DCO for the "Prove" objective and campaigns?	Yes, we have explored a solution with iPro but it is yet to be landed Kate Green - not sure where that netted out? We would consider though.
Media 	Is there a product catalog expected that the media team should use?	Blanca Led Trias Anna Barrett Richard Ward can you add for social specifically (BL) There is a product feed available featuring listings. We just launched a pilot with a live stream feed on Meta in the US (upon seeing success we will look into expanding this to other markets).
Media 	How have you previously elevated organic creative assets into paid workstreams? What is the process and how is it measured?	Blanca Led Trias Anna Barrett Richard Ward can you add for social specifically AB: in US, once BL: Yes, we've amplified organic assets through paid, both "unpolished" content and lightly branded versions. These are added to the standard creative rotation and measured against the same KPIs as paid assets. They've generally performed strongly for eBay Live, although this may be driven by the content itself (e.g., rare/unique items).
Media 	What are existing creative guardrails for paid amplification that determine whether an organic asset can be amplified with paid?	Blanca Led Trias Anna Barrett Richard Ward can you add for social specifically AB (+1 BL): Short-form, visible branding or upfront brand mention/RTB messaging. Alignment with overarching strategic priorities
Media 	What other creative workstreams exist that feed your paid media? What is the volume of creative and frequency of creative rotations in the mix?	- Partnerships (Conde, Love Island, Lad) - we negotiate rights up front to utilise in partnerships where possible - Influencer - both macro and then using things like TikTok CLP/Branded Buzz / YouTube Open Call to feed back into paid - Key programming which we show through Best Bits (clips of the best bits from programs) we then put back into paid - Support for key tentpoles/programming moments - Awaiting the US trial to be rolled out UK for live stream API feed into Meta (and then other platforms) where you can have a carousel of lives - Content from Events
Media 	Are you leveraging specific tags? If so, what tag management platform does the media team leverage? What tags/events/pixels are we able to track onsite in ads managers / offline attribution capabilities?	Blanca Led Trias Anna Barrett AB (+1 BL): We do not leverage tags on social. Onsite tracking in Ads Manager is mainly used for optimization purposes and diagnostics only, not SOT measurement/reporting. Onsite events sharing varies by partner. All social partners have some form of basic signal sharing besides TikTok (pixel, CAPI, MMP). Other media channels use Tealium - Floodlight tracking on approved pages for Google CM360/DV360

Media  	Is leveraging a 3rd party brand safe/viewability partner important? If so, where does the budget to cover the fees come from?	Yes, but this is not yet in place, we are looking to trial partners this quarter in the UK after a US trial earlier in the year.. It would need to be funded from the media budget
Media 	Who are the designated brand stakeholders and Points of Contact (POCs) required for final sign-off on paid media tactical plans and amplification of organic assets?	This is be addressed in the people mapping exercise
Media 	Have you previously ran media on X, LinkedIn, or Pinterest? If so, why were they previously tested and discontinued? Any interest in re-testing in the future?	We discontinued X, and would not want to pursue it again currently. Blanca Led Trias Anna Barrett can you add details for pin & linkedin AB (+1 BL): 2024-2025 Pinterest was a major strategic priority for the business across all funnel stages. 2026 has focused on scaling Lower Funnel (owned by Perf Mktg), with minimal Brand activity on Pinterest prioritizing other platforms with stronger audience fit for eBay Live. Our team has not run anything on LinkedIn - Corporate Comms owns LinkedIn Ads.
Media 	Are you able to provide performance data of all assets running in paid campaigns, including the Orca campaigns and the iProspect social partnerships?	Blanca Led Trias Anna Barrett Richard Ward not sure if there is an easy data dump to answer this quickly? Or if you need more details please flag them AB (+1 BL): Need more detail. Can certainly provide a data dump, but will require more manual work to map what's what. Let's discuss this live in the Channel deep dive session.
Media 	Can we get a mapping of your campaign set-up structure from campaign>ad set>ads for all platforms?	Blanca Led Trias Anna Barrett can you add for social specifically AB/BL: This is changing in Q4 and is still in development. Let's discuss this live in the Channel deep dive sessions.
Media  	What is the current live viewership journey to a live? What are the URLs for each journey (e.g., site vs. app)?	Blanca Led Trias Anna Barrett can you add for social specifically AB/BL: Paid/social is mostly driving to Latest Stream, ideally app-first, with web fallback. Q4 will evolve to App Download (eventually with deferred deep link to instream) and App First experiences, with web destination deprioritized until onsite product improvements are made to gate live experience and force app download/sign-in. • App user / app-installed journey: click from paid/social → deep link directly into the live-stream experience in the eBay app. ○ Latest stream in app: ebay://link/?nav=livecommerce&eventid=latest. ○ Latest stream in app with channel fallback: ebay://link?nav=livecommerce&eventid=latest&fallback=channel:{channelId}. ○ Direct event in app: ebay://link?nav=livecommerce&eventid={eventId}&fallback=seller or ebay://link?nav=livecommerce&eventid={eventId}&fallback=channel.

		• Web / site latest-stream journey: click from paid/social → land on a web latest-stream URL, usually with fallback logic if the intended stream is unavailable. ○ Hub latest stream: https://www.ebay.com/ebaylive/events/latest/stream. ○ Channel latest stream: https://www.ebay.com/ebaylive/events/latest/stream?fallback=channel:{channelId}. ○ Category latest stream: https://www.ebay.com/ebaylive/events/latest/stream?fallback=category:{categoryId}. ○ Seller latest stream: https://www.ebay.com/ebaylive/events/latest/stream?fallback=seller:{sellerId}. • Direct event journey: click from paid/CRM/social → go to a specific event stream URL ○ Web direct event: https://www.ebay.com/ebaylive/events/{eventId}/stream?fallback=seller Latest Stream: https://www.ebay.com/ebaylive/events/{eventId}/stream?fallback=channel. • Channel-page journey: this is still an available path, but current paid learning favors direct-to-stream / latest-stream because hub-style surfaces add friction. ○ Supported channel URL pattern: https://www.ebay.com/ebaylive/channels/{channelId}. ○ A current web variant also in use is https://www.ebay.com/ebaylive?channel={channelId}.
Media ✓	Do you currently have and manage your own eBay credit lines and business ad accounts across all social platforms? Does eBay Live have its own credit line and business accounts or are they shared across eBay core or other eBay properties?	Blanca Led Trias Anna Barrett can you add for social specifically AB/BL: we use an ebay credit line across business ad accounts for all social platforms, no different credit lines by LOB/initiative/team.
Media ✗ !!	Can you share historical test-and-learn agenda alongside key results/learnings as well as a view of current and future-facing learning agenda?	Blanca Led Trias Anna Barrett can you add for social specifically To be discussed in the upcoming Channel deep dive session.
Media ✓	What is the current reporting cadence and delivery schedule for sharing and presenting paid campaign results, BLS, and MMM results? Is there a specific template that needs to be leveraged? If so, can Vayner Media make modifications to the template?	Blanca Led Trias Anna Barrett can you add for social specifically AB: high level WBR every Tuesday, detailed MBR/QBRs (media template is new and evolving, will feed into high-level BU-facing MBR, template is WIP). Quarterly BLS included in QBR. Monthly cross-media IPSOS reporting (spend validation by partner).

Media ✕	Can you share examples of all current reporting formats (alongside reporting examples from iProspect)?	Blanca Led Trias Anna Barrett can you add for social specifically
Media ✓ !!	Are there any specific recurring leadership meetings or other relevant meetings on the books that would require media reporting to be completed by? What audiences are these various reports designed for?	Blanca Led Trias Anna Barrett can you add for social specifically JP: - Monthly Live reporting (due mid the following month) - Audience is working brand & media team - Standing up Marketing MBR series for eBay Live in the US - meetings will be at the end of each month with BU team (covering the prior month). Will pull from Monthly report.
Media ✓ !!	If Vayner could help change or solve 3 things within media, what would those be?	Jennifer Porile Blanca Led Trias Zoe Carson Michael Schuetz any thoughts here? More creative assets to optimise against at an L2 category level More insightful creative reporting & learnings / optimizations Systems/tools/strategies to operationalize the above more efficiently.

AEO

Category	Question	Response
AEO	What is your current SEO & AEO strategy?	US (Mica Hoffman): Optimize key metadata fields per platform with relevant keywords and visuals. DEPT AEO team participates in and reviews all concepts prior to shareout. DEPT has made copy more searchable and descriptive, reflecting words, phrases, and categories people are most likely to search for naturally within their queries. Ensured a balance of catchy hooks, personality, and product detail for strong entity and search coverage. Ensure key text is captured on-asset, in spoken dialogue, and within captions, as well as structure content around common questions our audience might ask.

		<table><tr><th>Platform</th><th>Key Metadata Fields</th><th>Highest GEO/AEO Impact Fields</th></tr><tr><td>Instagram</td><td>Username & Display Name, Bio, Image Alt Text, Caption (first 125 characters), Hashtags (3-5 targeted), Location Tag</td><td>Display Name, Bio, Alt Text, Caption</td></tr><tr><td>TikTok</td><td>Video Title, Caption/Description, Hashtags (3-5), On-Screen Text, Spoken Words/Auto-Captions, Sound/Audio Name, Profile Name, Bio</td><td>Spoken Words, On-Screen Text, Title, Caption</td></tr><tr><td>YouTube Shorts</td><td>Title, Description (first 2-3 lines), Hashtags (1-3), Captions/Subtitles, Thumbnail Filename</td><td>Title, Description, Captions</td></tr><tr><td>YouTube (Long-Form)</td><td>Title, Description, Tags, Chapters/Timestamps, Closed Captions (SRT), Category, Cards & End Screens, Playlist Title, Playlist Description</td><td>Title, Description, Chapters, Captions</td></tr><tr><td>Threads</td><td>Profile Name, Username, Bio, Post Text, Image Alt Text, Hashtags (1-3), Link in Bio</td><td>Profile Name, Bio, Post Text</td></tr><tr><td>Reddit</td><td>Subreddit Selection, Post Title, Post Body, Flair Tags, Link URL/Anchor Text, Community Description</td><td>Subreddit, Post Title, Post Body</td></tr><tr><td>Facebook</td><td>Page Name, Username, About Section, Post Text, Image Alt Text, Event Name, Event Description, Event Location, Video Title, Video Description, Hashtags (1-3)</td><td>About Section, Post Text, Event Metadata</td></tr><tr><td>Pinterest</td><td>Pin Title, Pin Description, Board Name, Board Description, Image Alt Text, Destination URL, Profile Name, Bio</td><td>Pin Title, Pin Description, Board Name</td></tr><tr><td>X (Twitter)</td><td>Profile Name, @Handle, Bio, Pinned Post, Tweet Text, Image Alt Text, Hashtags (1-2), Link Card Title</td><td>Bio, Pinned Post, Tweet Text</td></tr></table>	Platform	Key Metadata Fields	Highest GEO/AEO Impact Fields	Instagram	Username & Display Name, Bio, Image Alt Text, Caption (first 125 characters), Hashtags (3-5 targeted), Location Tag	Display Name, Bio, Alt Text, Caption	TikTok	Video Title, Caption/Description, Hashtags (3-5), On-Screen Text, Spoken Words/Auto-Captions, Sound/Audio Name, Profile Name, Bio	Spoken Words, On-Screen Text, Title, Caption	YouTube Shorts	Title, Description (first 2-3 lines), Hashtags (1-3), Captions/Subtitles, Thumbnail Filename	Title, Description, Captions	YouTube (Long-Form)	Title, Description, Tags, Chapters/Timestamps, Closed Captions (SRT), Category, Cards & End Screens, Playlist Title, Playlist Description	Title, Description, Chapters, Captions	Threads	Profile Name, Username, Bio, Post Text, Image Alt Text, Hashtags (1-3), Link in Bio	Profile Name, Bio, Post Text	Reddit	Subreddit Selection, Post Title, Post Body, Flair Tags, Link URL/Anchor Text, Community Description	Subreddit, Post Title, Post Body	Facebook	Page Name, Username, About Section, Post Text, Image Alt Text, Event Name, Event Description, Event Location, Video Title, Video Description, Hashtags (1-3)	About Section, Post Text, Event Metadata	Pinterest	Pin Title, Pin Description, Board Name, Board Description, Image Alt Text, Destination URL, Profile Name, Bio	Pin Title, Pin Description, Board Name	X (Twitter)	Profile Name, @Handle, Bio, Pinned Post, Tweet Text, Image Alt Text, Hashtags (1-2), Link Card Title	Bio, Pinned Post, Tweet Text

AEO	Do you have any AEO tracking tools set up today? If yes, what is your topic/prompt strategy?	US (Mica Hoffman): We’ve piloted a bespoke, demand-based Atomizer tool with our internal AEO team for YouTube, which optimizes existing video content into AEO/SEO-friendly clips, metadata and chapterization. Our pilot has been demand-led rather than prompt-led, using search-demand data to identify opportunities to optimize existing content. The AEO team also conducted LLM citation and perception testing, but we do not currently have an always-on tool tracking social visibility across a recurring set of prompts. Broader AEO testing has focused on areas such as buyer/seller protections, corporate information, and brand perception. Confirming the AEO team has an existing relationship with Profound, they meet bi-weekly. UK: We have a Pilot set up in the UK with Bluefish. They are covering a large volume of prompts against eBay Masterbrand, C2C and Live which are broken down against a number of initiative behaviours & motivations.																														
AEO	Have you executed on AEO content before? How are you defining success? What is your current operating model for executing AEO content across website, social & earned media content?	US (Mica Hoffman): Our model is currently cross-functional and evolving. The internal AEO team brings AEO expertise, demand data, tooling and measurement, while channel owners translate those insights into execution across their respective surfaces. For Social, we’ve begun testing this through the YouTube Atomizer pilot. We defined success across AI discoverability with citation rate and volume paired with organic social KPIs like average view duration. After ~60 days, optimized longform content increased its AI citation rate on Google Desktop AI Mode from 5.4% to 7.6%, outperforming control by +4.4pp; we also saw statistically significant improvements in average view duration and view percentage versus control. Broader recommendations span owned-site technical/content optimization and ensuring content is structured and distributed in ways LLMs can retrieve and cite. Richard Ward																														
AEO	Which LLM crawlers are allowed/blocked from crawling eBay’s domain(s)?	US (Mica Hoffman) For eBay.com, AI training crawlers including GPTBot, ClaudeBot, PerplexityBot, Bytespider, CCBot, ChatGLM-Spider, anthropic-ai, AmazonBot, meta-externalagent and Applebot-Extended are blocked																														

		sitewide by default, with select informational properties (e.g., Help, Seller Center and Authenticity Guarantee) explicitly allowed. AI search/retrieval agents including OAI-SearchBot, ChatGPT-User, Claude-SearchBot and Claude-User have broader crawl access, subject to eBay's standard path-level restrictions. eBay Inc. has separately been intended to remain accessible to AI bots. Kate Green do you know this one, if not I can check?
AEO	Who are the primary AEO stakeholders across 1. Organic Search (AEO & SEO) 2. Brand 3. Social Content 4. PR & Partnerships for Earned Media 5. Website (marketing and crawlable pages) 6. Product Catalog & Feed (e.g. product data fed to Google Shopping and any allowed agentic shopping platforms)	All listed have a stake + Analytics & GCI (insights)
